DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Firstly, <u>Applicant is required</u> to define <u>one</u> single composition specie disclosed in claims 13, 14, or 15. Secondly and specifically, in the single composition specie election, <u>three</u> exact and specific constituents must be elected, i.e., one single specie election of each: (A) lubricant, (B) antiseptic, and (C) fungicide to make up the one single composition specie. For example,

- I. Applicant must elect one lubricant specie from list (A1) to (A3), namely:
- (A1) Propylene glycol or glycerin
- (A2) A specifically named lubricant disclosed in instant specification, or
- (A3) A specific mixture of lubricants, specifying the combination of lubricants by proper name
- II. Applicant must elect <u>one</u> chlorhexidine-containing compound antiseptic specie from list (B1) to (B3), namely:
- (B1) Gluconate
- (B2) Digluconate salt, or
- (B3) A specifically named antiseptic disclosed in instant specification

Application/Control Number: 10/627,968 Page 3

Art Unit: 1614

III. Applicant must elect one fungicide specie from list (C1) to (C3), namely:

(C1) Methyl paraben

(C2) Propyl paraben, or

(C3) A specifically named fungicide disclosed in instant specification

Currently, claims 1 – 12 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of

record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Election/Restrictions Proper

MPEP §809.02(d) states "[w]here only generic claims are presented, no restriction can be required except in those applications where the generic claims recite such a multiplicity of species that an unduly extensive and burdensome search is necessary." In this instant case, claims 1-12 cited are of such a multiplicity of species that an unduly extensive and burdensome search would be necessary if all of the claimed species were to be examined together.

The present claims are directed toward a prophylactic lubricant composition for use during sexual relations. Present claim 1 and claims dependent from claim 1 for example provide a variety of possibilities and dosing parameters in relation to dependent but specific claims 13, 14, and 15. Therefore, it would present a serious search burden to the Examiner if all claimed species were searched together.

Further, a majority of the combinations encompassed by the present claims has acquired a separate status in the art due to the interchangeability of certain constituents. An instant example would be the interchangeability of an antiseptic chlorhexidine salt. The composition could consist of either gluconate or the digluconate

salt, which is encompassed by an antiseptic chlorhexidine salt disclosed in claim 5. All of the claimed compositions are patently distinct and fully capable of supporting separate patents.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy E. Betton whose telephone number is (571) 272-9922. The examiner can normally be reached on Monday-Friday 8:30a - 5:00p.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ardin H. Marschel can be reached on (571) 272-0718. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
